Battery temperature is too low to stop charging

Overview

Charging batteries at extreme temperatures can be a delicate process. Lithium-ion batteries, in particular, are sensitive to temperature fluctuations, which can affect their performance, lifespan, and safety. When the battery temperature drops below 0°C (32°F), the charging process can be slowed down or even stopped to. Is your phone not charging due to low temperatures?

That seems odd, doesn't it?

Unless you're in the middle of winter, located in the Arctic or Antarctic regions, or experiencing extreme cold, your phone probably isn't freezing, yet. It's 95º F out! When it's not cold how can the phone temperature be too low to charge?

Well, you may be dealing with one of several issues, including a software error, that some people claim is common with The Samsung Galaxy. Have you ever wondered how frequent charging affects your phone's battery?

Perhaps it's best to charge only when absolutely necessary?

Charging behavior does impact your battery's. To mitigate the effects of extreme temperatures on battery performance, several advanced solutions can be employed. One approach is to use temperature-compensated charging, which adjusts the charging.
