

## Choosing a good solar street light

### Overview

No matter which type you are considering, all types of solar street lights consist of a solar panel, lighting module and fixture, rechargeable battery, and a pole. Some premium street light products also integrate MPPT charge controller, advanced Battery Management System (BMS) and/or microwave sensor for a. Also called "separated solar street lights" and regarded as the first-generation of solar-powered street lights, these lights generally have a solar panel installed on the top of the light pole. The progress of battery technology is the principal push towards the emergence of all-in-two solar street lights. Lithium-ion batteries and the lithium iron phosphate variant (LiFePO<sub>4</sub>) offer an upgraded energy storage solution. It can be expected that the cost of solar panels, batteries and lighting modules will keep going down in the future. The price gap between different. Now comes the newest version! As the name implies, all-in-one solar street lights combine the solar panel, lighting module and battery storage into one, leading to the sleekest and most elegant.
