

## Erecting solar panels

### Overview

Part 14 of the GPDO covers solar energy. Class A allows for solar panels to be erected on residential properties subject to a few conditions. The most important factor is that you must keep the solar photovoltaic (pv) or better known as a solar panels or indeed solar roof tiles within 20cm of the wall or slope of the roof. Yes, you can. If you are looking to install solar equipment on a commercial property you can do this under Class J. Again there are a few restrictions such as the solar equipment must not be higher than 0.2m if on a sloping roof or 1m above. You can install solar panels or solar tiles in Conservation areas. You will not be able to install them on a wall facing a highway if residential, but you can on. See the relevant sections within Planning Geek: Class A - Solar equipment on domestic premises Class B - Stand-alone solar equipment on domestic premises Class J - Solar equipment on non-domestic premises Class.
