

Lithium battery welding boost board

Overview

Addressing the need to accurately and non-destructively assess the quality of welds in batteries earlier in the manufacturing process. Amid rising global awareness of the need to achieve The United Nations Sustainable Development Goals (SDGs), many countries and companies have been working to realize a carbon. High praise for a dedicated tester that can quickly and accurately measure super-low resistance that would be undetectable with a DMM In its effort to quantify aspects of weld quality that are not readily observable and to do so in a highly reproducible manner, Company J. Automatic, super-low resistance measurement of welds with accuracy, safety, and speed Company J built a system capable of automatically measuring super-low resistance accurately, safely, and quickly in the battery pack busbar weld.
