Overview

The lithium iron phosphate battery (LiFePO₄ battery) or LFP battery (lithium ferrophosphate) is a type of lithium-ion battery using lithium iron phosphate (LiFePO₄) as the cathode material, and a graphitic carbon electrode with a metallic backing as the anode. Because of their low cost, high safety, low toxicity, long. LiFePO₄ is a natural mineral known as. and first identified the polyanion class of cathode materials for. LiFePO₄ was then identified as a cathode. The LFP battery uses a lithium-ion-derived chemistry and shares many advantages and disadvantages with other lithium-ion battery chemistries. However, there are significant differences. Resource availability Iron and phosphates are. • • • • • Cell voltage • Volumetric = 220 / (790 kJ/L) • Gravimetric energy density > 90 Wh/kg (> 320 J/g).
