

Solar thermal equipment for the Senegal solar power plant

Overview

With roughly half of the total population living above the poverty line, significant improvements are needed to lift more people out of poverty. Roughly 75% of the Senegalese population depends on agriculture as their income source. Another primary industry in Senegal is mining. Senegal's economy rises. Access to electricity plays an important role in the economy and contributes to reducing poverty. Senegal relies heavily on oil imports for fuel. Roughly 80% of Senegal's energy is "oil. The solar power plants are located in Kael and Kahone, two small towns that rely on agriculture and have high poverty rates. Lack of electricity access is higher in rural areas similar to Kael and. These renewable energy projects attract potential investors to Senegal, giving the country even more opportunities to increase sustainable energy, including hydro, wind, thermal and off-shore natural gas. Senegal is also home.
